Abdullah Morrison

Seattle, WA, USA | abdullahmorrison@gmail.com | abdullahmorrison.com | github.com/abdullahmorrison

Summary

Full-stack software engineer building internal developer platforms and tooling that make engineers and AI agents faster, with Go, TypeScript, and React.

Skills

Languages: TypeScript/JavaScript, C#, Go, Bash, PowerShell, Java, Lua, HTML, CSS/SASS
Frameworks & Libraries: React, Next.js, Vue, React Native, Tailwind, Jest
Infrastructure & Tools: Docker, AWS, Terraform, Datadog, Linux
Databases & APIs: MongoDB, MySQL, PostgreSQL, GraphQL/Apollo

Experience

Software Development Engineer I, Expedia Group — Jan. 2026 – Present

- Bridged the gap between AI coding agents and the internal platforms engineers use daily, wrapping platform APIs into CLI commands so agents could call them directly instead of being blocked by web-only UIs, using **Go**.
- Cut new-hire machine setup from over an hour to minutes by creating the onboarding scripts every incoming engineer now runs on day one, using **PowerShell** and **Bash**.
- Built the telemetry service that gave engineering leadership their first visibility into onboarding script adoption, tracking usage across **100+** new hires, using **Node.js** and **Datadog**.
- Made Backstage's manual, unintuitive app-creation process usable by AI agents for the first time, authoring a **Markdown/YAML** skill that knows which tools to call so agents can scaffold a new app end to end.
- Redesigned the developer portal's search page end to end and shipped it to production, giving every engineer at the company a faster, more usable way to find internal docs and services, using **React** and **TypeScript**.

Fullstack Developer, Alveus Sanctuary — Dec. 2022 – May 2023

- Built an interactive livestream overlay that educated ~**7000** weekly viewers about animal conservation using **React, TypeScript, NodeJS,** and **MongoDB.**
- Developed a real-time chatbot overlay controller using **TypeScript** and **NodeJS.**
- Led a 6-person open-source team, contributing features via pull requests.
- Developed a prototype to propose to the CEO before joining the company.

Software Engineer, Microsoft — May 2022 – Aug. 2022

- Reduced the steps to assign a build failure to a teammate by ~**40%** by developing a Microsoft Teams message bot command to automate the process using **C#**.
- Created a plugin in Microsoft Teams that displays who may be responsible for a build failure in a drop-down using **C#**.
- Modernized and refactored frontend components for an internal tests website using **VueJS**.

Web Developer, 76Engage — Sept. 2021 – Dec. 2021

- Built a plugin that streamlined adding and searching images on Drupal sites, using **VueJS** and **Docker**.

Web Developer, Digital Main Street — Jan. 2021 – Mar. 2021

- Improved the sales of 12 small businesses by redesigning their website's UI and backend to make it easier for customers to make a purchase using **Shopify, WordPress, SquareUp, Wix, Squarespace**, and **wireframes**.

Software Engineer, University of Ottawa — Jun. 2020 – Aug. 2020

- Helped uOttawa sports staff more easily access uOttawa athlete data by developing a website to display that data using **PHP, JavaScript,** and **MySQL.**

Projects

Motivation Scale — motivationscale.com | github.com/abdullahmorrison/motivation-scale

- A website and mobile app that helps users track how their goals affect their emotions. Made with **NextJS, TypeScript, MongoDB, GraphQL/Apollo, Docker, NodeJS, Jest, SCSS** and **React Native.**

Education & Certifications

University of Ottawa – Honours Bachelor of Science in Computer Science — 2018 – 2023
AWS Cloud Practitioner Certification – CLF-C02 — 2024
AWS Solutions Architect Associate Certification – SAA-C03 — In-progress
Terraform Associate Certification – 003 — In-progress
